

CONGRATULATIONS! YOUR SITE IS READY!

Below you will find a list of helpful hints to get your site up and go going!

How To Get Started:

Your site is ready. You can use your FTP software to upload files to the server. Check you email for FTP settings including username and password. You may also login to your cPanel to setup MySQL databases, email and monitor your disk usage and bandwidth. In your cPanel you will find thousands of free website templates.

Wordpress

Your site comes with the Wordpress Blogging and Webiste Builder platform. To finalize the Wordpress installation, follow these steps.

1. Login to cPanel
2. Select the "File Manager" icon.
3. Browse to your public_html folder.
4. Select the box next to the wordpress-3.0.1.zip file.
5. Click the "Extract" icon from the file manger menu.
6. Extract the files to your public_html (default) folder.

Your site is ready with Wordpress. You can find the Wordpress files at www.yoursite.com/wordpress. You can move all of the Wordpress files out of the Wordpress folder and place them directly into the public_html folder if you want to use the Wordpress platform for your entire site.
